

### Tropica Island Resort Testimonial for In2Care Mosquito Trap

It is well known that Mosquitoes are pervasive insects that exist in the tropics. Mosquitoes not only cause nuisance by their bites but also transmit serious human diseases like:

- Malaria
- Zika
- Dengue
- Chikungunya
- Yellow Fever
- Filariasis
- Japanese Encephalitis, etc.

Here at Tropica Island Resort we have been fortunate to trial the In2care Mosquito Traps for the past few months which has proven to be innovative and easy to use. This alternative control measure is what Tropica Island Resort has executed to directly target the larvae (to cease the breeding cycle) and adult mosquitoes at the same time.

The old conventional ways of eradicating these pests such as using aerosol, repellents, treated bed nets, mosquito coils were not enough to combat our individual needs and our guests were compromised. As a sustainable ecofriendly resort traditional insecticide fogging methods using harmful chemicals was never an option.

The In2care Mosquito Trap has minimised the breeding numbers in and around our guests' areas, with the actual traps becoming the larval breeding sites. We have a total of 22 of them located throughout the resort that are hidden away in our lush tropical gardens out of sight and out of mind, hereafter making a vast improvement. With the help of adult mosquitoes themselves, the water in the traps become contaminated and they continue to impact other receptacles around the traps that accumulate water.

The In2care mosquito traps have also rapidly reduced adult mosquito populations indoors or outdoors. The implementation and servicing of these traps are affordable and sustainable making it a vital product to prevent harm to our guests and encroaching on our guests' experience. Furthermore, this product has added environmental value which is an important part of our focused efforts in sustainable business practices.

I have no doubt this revolutionary product will assist other resorts experiencing similar mosquito challenges, as well as local communities including remote locations where some of the diseases do exist. I highly recommend In2care Mosquito Traps to anyone wanting an alternative control measure to overcome an influx of Mosquito activity.
